

We Build What You Need.

Flyover Patio Covers

A result of the Altec initiative development program, flyovers have become a popular and cost-effective alternative to gabled patios. The Flyover patio adds approximately 700mm extra head height compared to a conventional patio cover, thereby allowing a greater sense of space and openness to your entire outdoor area.

- Continuous ventilation to remove hot air
- Increased light into existing dwelling
- Greater sense of space & openness
- Can have a reverse pitch to maintain views
- 75x75 powdercoated header posts connected to main beams for stability in all conditions
- No unsightly fascia brackets
- Spans up to 6.3m
- Council Approval
- Downpipe connected to stormwater
- 10yr Workmanship Guarantees
- Pre-building inspection by Construction Supervisor

Unlike other types of patio designs, the flyover should only be constructed out of the strongest brands, built from hi-tensile steel, heat deflective single skin or insulated. By far the most popular is the high gloss heat deflective which, with continued ventilation, ensures a cooler outdoor entertainment area all year round.

Typical Specs (Heat Deflective Covers)

Products	Steel G550 Hi Tensile Steel
Coating 1/2	Az/50 Zinalume/Kaolin Colorbonded
Thickness	0.47mm TCT
Colours	Wide Range to Suit Your Home
Profile	W Profile 50mm
Wind Rating	W51 Cyclonic Rated
Gloss	Maximum possible
Slope	Min. 1 degree
Locking	Positive Absolute Locking
Deflection	Span/90 minimal
Strength	Greater resistance to hail damage
